| Course title | ADVANCED STATISTICAL PHYSICS | | | | | | | | | | | | | |
| Course ID | Semester | Course status | ECTS credits | Teaching hours | | | | | | | | | | |
| PTH7051 | I/II | Elective | 10 | 30 | | | | | | | | | | |
| Course aims and expected learning outcomes | <p>The aim of the course is to expand the knowledge that students acquired during the statistical physics course.</p> <p>Expected learning outcomes: Mastering the knowledge, methods and mathematical apparatus of quantum statistics. Getting acquainted with various applications of quantum statistics.</p> | | | | | | | | | | | | | |
| COURSE CONTENT | | | | | | | | | | | | | | |
| <p>Equilibrium quantum statistics. Formalism of quantum mechanics in Dirac notation. Basic concepts of quantum statistics. Basic results of equilibrium quantum statistics. The ideal gas of quantum particles. Non-equilibrium statistical operator. Linear response of the system and Green's function. The energy and entropy of a non-equilibrium ensemble. The second quantization and Wick's theorem. Phonons and the Debye theory of specific heat. Ferromagnetics at low and high temperatures. Kinematic levels in an optical excitation system. Microtheory of the dielectric constant. Superfluidity. Superconductivity.</p> | | | | | | | | | | | | | | |
