Study program	Level of studies			First cycle		
	Study program name		Physics Education			
Course name	CLASSICAL MECHANICS I FOR TEACHERS					
Course ID	Semester Course status		ECTS credits L+E			
PTH3621	=	MAN	DATORY	6	5	3+2
Lecturer						
Aims and intended learning outcomes	Aim of the course is to teach students the principles of Classical mechanics and apparatus for particle and general holonomic system motion. After successfully completed this course, student will know how to: - describe and solve particle motion problems in different curvilinear coordinate systems. - analyze particle central force motion, particularly for inverse square force, and interpret an effective potential graph. The student will be familiar with dynamic laws for systems of particles and characteristic physical quantities, and methods for solving problems of dynamics of particle systems with constraints. The student will be familiar with Lagrangian mechanics					
Course content						
mathematical description of the motion, basic kinematic quantities. Curvilinear coordinates. Principles of dynamics: Newton's laws, the principle of determinism, Galilean's principle of relativity. Dynamics of the material particles: differential equations of motion, integrals of motion. Basic dynamic quantities: momentum, angular momentum, kinetic energy, work. Potential Energy and Conservative Forces. Force as the Gradient of Potential Energy. Rectilinear motion, Energy diagrams. Central motion: solution of the equations of motion in polar coordinates, Effective potential, Energy diagrams. Binet's formula. Particle in gravitational or Coulomb field. Particle scattering by a central potential. Particle system dynamics: differential equations of motion, internal and external forces. Momentum, Center of mass, Angular momentum, Mechanic energy of the system. König's formula - dynamic quantities in the center of mass reference frame. Closed systems, classical integrals of motion. The virial theorem. Variable mass systems: the rocket equation. Two-Body Central-Force Problems. Relative Coordinates, Reduced Mass.
