Study program	Level of studies		First cycle	
	Study program name		Physics Education	
Course name	INTRODUCTION TO COMPUTER SCIENCE FOR PHYSICISTS II			
Course ID	Semester	Course status	ECTS credits	L+E
PCS2211	Π	ELECTIVE	2	0+2
Lecturer				
Aims and intended learning outcomes	The objective of the course is to introduce students to perform various calculations in the Mathematica software package. It is expected that students successfully adopt the content of the course and that the acquired knowledge is successfully applied in their further academic education and/or scientific work.			
Course content				
expressions. Logical terms and their use. Solving equations, inequalities, and systems. Manipulations with lists, vectors and matrices. Function graphs. Examples in physics. Introduction to procedural programming. Basic numerical calculations. Export and import of data. Examples in physics.				
Student workload (hours)			Grading	
Lectures and Exercise	es 30	Assessment m	nethod	Points
Exam preparation	15	Course	Test	50
Assignments	0	Final Ex	kam	50
Other	5			
Total	50			
		Total		100
